- ✓ Special messages entered within a transaction
- ✓ Customer charge file
- ✓ Ticket printing
- ✓ Adding and transferring check routine
- ✓ Charge tip functionality
- ✓ 2nd language printing to kitchen
- ✓ Additional PLU character links for printing & displaying

Optional Remote Display

Casio has two optional, heavy duty, black cash drawers for the QT-6600. The DL-2324 is a smaller drawer with a 5 bill/5 coin removable till for less demanding operations. The DL-3622 is the larger cash drawer for more demanding applications with a 6 coin/5 bill removable till. An optional extension cable, MDL-11, is available to remotely mount the cash drawer from the terminal.

The QT-6600 has standard two cash drawer ports with cables. The multiple drawers allow managers the ability to control operator's access to particular drawers. The drawer assignment provides a level of security to management to monitor the flow and handling of money by operator.

Specifications

Display	15 inch, color LCD with touch panel control
Environment	Operating temperature — 32F - 104 F Operating humidity - 20 - 85% RH
Dimensions	14.25" D X 14" H X 14.50" W
Weight	Approx. 18.3 lbs (including stand)
Power Consumption	AC 120-240V +/-10%/Max. 1.5A
Communication Port	Ethernet (10/100 Base-T/Tx) X 1 RS232c X 6

Drawer extension cable	MDL-11

CASIO®

Casio's new flash ROM touch POS terminal offers flexible connectivity, stable system integrity, easy operation, speed and efficiency for your hospitality or retail operation.

**Smart Touch
QT-6600**

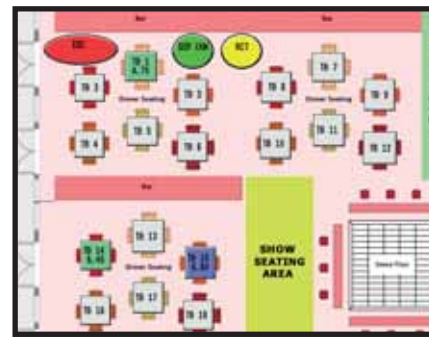

Stylish Smart Touch

Multiple menu screens with 70 item buttons provide flexibility and simple operations. Graphical icons assigned to keys further enhance ease of use for operators.

Easy to use

- The wide bright 15-inch color, TFT LCD touch panel assures easy accurate operation. The touch screen offers clear categorization for item registration, numeric entry and entry confirmation.
- A built in 2 X 20 character rear display (with a selectable two (2) color back-lit background—emerald green or white) makes it easy for customers to monitor sales transaction.
- The QT-6600 supports Ethernet/RS232c remote printers (Casio UP-400/Epson) for flexible network configuration on your business premises.
- The QT-6600 15" display can be easily tilted and adjusted from range of 20 to 70 degrees for optimal operator viewing.

Touch the future with Smart Touch!

Connectivity

- Six RS232c ports support flexible, varied configurations of peripherals which include printers, scanners, scales, PC, integrated credit/debit/gift EBT card device, coin/liquor dispensers, pre-paid card device, kitchen and video surveillance devices.
- An Ethernet 10/100 Base T/TX port ensuring smooth, fast and reliable in-house communications using popular CAT 5 cable for easy wiring.
- Two standard cash drawer ports utilizing Casio's medium (DL-2434) and large (DL-3622) sized heavy duty black drawers.
- An optional three-line alpha/numeric LCD remote customer display (Casio QT-6060DB) for those environments requiring flexibility for placement of a customer display.
- Operator access to the terminal can be accomplished through three methods; secret code, optional dallas key or through an optional magnetic stripe reader.
- An optional PS2 keyboard can be attached to assist in operations requiring alpha or numeric entries such as special text messages within a transaction, customer file entries or program changes in program mode.

Security

- An operation will resume quickly where it left off after a power failure.
- An intuitive screen layout reduces training time for new employees
- A master and backup system for guest checks maintains the integrity of vital transaction information.
- Password codes can be assigned to staff, limiting access to various program modes and operations.

System Application

Fast Food/Cafeteria/Kiosk/Take-out/Concessions

Graphical icons assigned to keys facilitate easy operations with minimal training.

An FTP communication function permits remote site access to retrieve or send sales from various sites along with program updates from a central office.

A centralized stock feature in a concession or quick service applications provides a quick snapshot of on-hand inventory. The mix & match discounting will automatically apply a discount when items belonging to a combination meal are entered individually.

A large Electronic Journal allows managers to view and verify a customer order in question and print it out.

A detailed time & attendance provides valuable information to managers to control staffing.

A centralized order number is available for take-out operations wanting to control and identify customer orders. Customer names can easily be entered within an order for the purpose of identifying orders in the kitchen.

Flexibility and High Performance!

Restaurants/Bars

The system permits the sharing of table and guest check orders between multiple terminals using a master/backup master configuration eliminating any single point of failure in the system.

Printers (kitchen/receipt) can be shared between terminals using either the Ethernet connection or one of the six serial ports. Orders are backed up automatically to an alternate printer if the primary printer fails. Kitchen items can print in order of priority, by item grouping or print as they were entered.

Three full screen graphical table layouts give staff direct easy access to table in their area of responsibility. When service staff signs on, the tables layout in their work area appears automatically on the screen. This eliminates staff confusion on the tables being accessed and improves customer satisfaction.

Splitting guest checks or items is made easy on the QT-6600 through the use of an intuitive graphical/split check screen. The terminal provides servers with a quick method of splitting multiple checks so more time can be spent servicing customers.

Grocery/Liquor/Tobacco/Retail

Bar code reading of EAN/UPC codes improve registration time, item and price accuracy.

Large scanning file 60,000 items to handle small to large retail operations requiring scanning. Each item can have up to seven price levels and sales counter on reports.

A simple Not Found Item operation provides operators the ability to easily add an item not in the file within a transaction. A Not Found Item report is available to identify items added using this operation.

Additional features include age verification for liquor/tobacco applications, customer charge file, the ability to scan price embedded bar codes, mix and match file, interface to EBT and check verification applications for grocery needs.
